DETAILED ACTION

Drawings

The examiner withdraws the drawing objection from the previous office action in light of applicants remarks filed on 04/08/2003.

Allowable Subject Matter

Claims 1-16 are allowed over the prior art.

The following is an examiner's statement of reasons for allowance: Prior art discloses a magnetic bearing having a rotor with an axially facing surface that is supported for rotation about an axis and a stator that is separated from the rotor surface by an air gap and the stator having an annular electromagnetic coil that is attached and an annular ferromagnetic body. However independent claims 1 and 16 are allowable over the prior art which does not disclose two radially spaced concentric ring poles that are spaced apart from the rotor surface and the two annular axial air gaps on a single axial side of a rotor having annular ferromagnetic region that is axially aligned with the stator poles that cooperates magnetically with the stator to produce an attractive force of a bearing. A permanent magnet in the stator for producing a bias flux through first and second bias flux paths and a first path including portions of both of the ring poles and that both of the axial air gaps and an annular ferromagnetic region of the rotor, the second path including a shunt that is magnetically in parallel with an annular ferromagnetic region of a rotor and bypasses an axial air gaps. A second path having

reluctance to a flux from a permanent magnet that is comparable with magnetic reluctance of the first path.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
